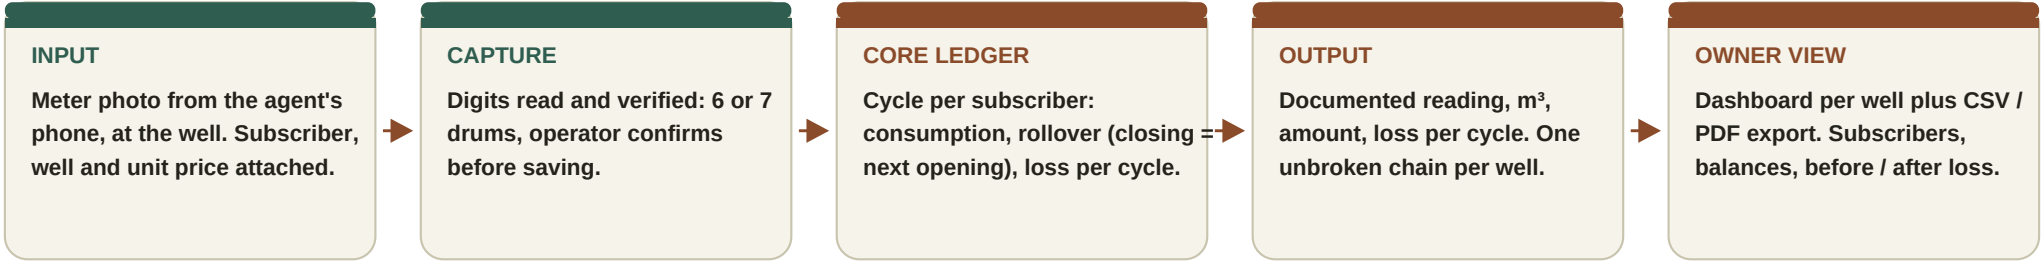
Azal Soft Water Platform

Architecture in one diagram — input → what our technology does → output



BUILD
Cycle and loss engine · the app · reports · security rules

BUY
Firebase (Auth, Firestore, hosting) · vision model · the phone

PARTNER
Well owners for pilots · water department or university for the audit

System boundary: a phone at the well and a cloud backend — no smart meter, no SIM, no energy per cubic metre.

The defensible part is the middle of the diagram: the cycle ledger rule (closing reading = next opening) and the loss it produces.
